

iMVP Minimum Requirements

Using a network and computer with at least the following minimum requirements will help ensure you have a successful iMVP experience.

Please note that it is very important that your system meets the minimum requirements. You are participating in a classroom environment and, just like in a traditional classroom, ineffective communication can have a negative impact on the experience not only for you, but also for your peers in the classroom.

Recommended Network Bandwidth

- The bandwidth will be optimized for the best experience based on the participants' network. It will automatically adjust for mobile, WiFi or Wired environments.
- We recommend your network should provide a consistent minimum of **1.5Mbps Download** and **1.5 Mbps Upload**. You can check your network speed at www.speedtest.net.

For Best Results, Don't Use Mobile or WiFi Connections

For best results, we strongly recommend using a wired network connection instead of a wireless network. To ensure your computer is using your network, plug in your network cable and turn off WiFi and/or mobile connections.

Processor Requirements

- Any 1 Ghz single core processor or better

Operating System and Browser Requirements

- Windows 10, Windows 8 or 8.1, Windows 7, Windows Vista with SP1 or later, Windows XP with SP3 or later.
- Mac OS X with MacOS 10.6/Snow Leopard) or later
- IE7+, Firefox, Chrome, Safari5+

Use the provided webcam and headset

Other web cameras and microphones can be used, but we strongly encourage the use of the camera and headset included with your iMVP package. CPU speed and performance can be severely decreased by use of older web cameras. Internal microphones and speakers can significantly decrease sound quality.
