Microsoft - SharePoint 2010 Business Intelligence Services

Code: 55003  
Length: 4 days  
URL: View Online

This instructor led course provides students with the necessary knowledge to work with all the associated SharePoint 2010 Business Intelligence services including PerformancePoint service, Excel services, Business connectivity services, Visio services and the Business Intelligence center.

Skills Gained
Work with the SharePoint 2010 Business Intelligence Center.  
Use PerformancePoint Services.  
Use Business Connectivity Services.  
Use Excel Services.  
Use Visio Services.  
Use PowerPivot.  
Develop mashups.  
Develop interactive diagrams.  
Use Report Builder 3.0.  
Explain the Microsoft business intelligence stack.  
Develop dashboards.  
Understand security.  
Understand authentication.

Who Can Benefit
This course is intended for Power Users, Business Intelligence Developers and IT Professionals that will be involved with the design, development and maintenance of SharePoint 2010 Business Intelligence solutions.

Prerequisites
- An understanding of the benefits of business intelligence.

Course Details

Outline
Module 1: Course Overview  
This module explains how the class will be structured and introduces course materials and additional administrative information.  
Lessons
- Introduction  
- Course Materials  
- Facilities
Module 2: The Business Intelligence Stack
We have split this module into sections. First, we are going to look at the three different ways in which business intelligence can be viewed. Then, we are going to look at the services the SQL 2012 provides us and how they apply to business intelligence. We will then move to SharePoint 2010 and look at the SharePoint Services to examine their relevance and how we can use them in business intelligence to surface data. Finally, we will look at PowerPivot.

Lessons
- Business Intelligence in Three Ways
- SQL 2012 Business Intelligence
- SharePoint 2010 Business Intelligence
- PowerPivot

Lab 1: The Business Intelligence Stack
- SQL 2012 Multidimensional Model Basics
- SQL 2012 Tabular Model Basics

After completing this module, students will be able to:
- Browse the data within a cube using SQL Server Management Studio.
- Browse data using Visual Studio 2010.
- Connect to a tabular source, import tables, and explore the data.

Module 3: SharePoint 2010 Business Intelligence Center
In this module, we are going to cover specifically the Business Intelligence Center template within SharePoint. We are also going to cover some things that generically apply to SharePoint that you can use within business intelligence. Also covered are some concepts such as content types, which are handy to have a working knowledge of for anyone that works within SharePoint.

Lessons
SharePoint Central Administration
The Business Intelligence Center
Permissions and Roles
Document Libraries and Lists Included

Lab 1: SharePoint 2010 Business Intelligence Center
- SharePoint Central Administration
- SharePoint Business Intelligence Center (Optional)

After completing this module, students will be able to:
- Explore the options and settings available within Central Administration.
- Create a new web application and business intelligence site while exploring the features of both.

Module 4: SharePoint 2010 Excel Services
In this module, we will explore the core components of Excel Services. We will cover Excel Web Access and its capabilities along with any...
differences you may encounter in the browser as opposed to the desktop client. Lastly we will explain the save and share process and have a look at best practices.

Lessons
- Core Components
- Excel Web Access (EWA)
- What Excel Web Access is Not
- Differences in the Browser vs. Desktop
- SharePoint Libraries to Store Workbooks
- The Save and Share Process
- Excel Web Part
- Best Practices

Lab 1: SharePoint 2010 Excel Services
- Creating a Library to Hold Excel Workbooks
- Save and Share an Excel Workbooks to a SharePoint Document Library
- Add an Excel Web Part to a Webpage

After completing this module, students will be able to:
- Create a SharePoint library to hold Excel workbooks and explore trusted file locations.
- Create an Excel workbook with a parameter and save it to a SharePoint document library.
- Add Web Parts to a webpage.

Module 5: SharePoint 2010 PerformancePoint Services
In this module, we will give you an overview of PerformancePoint Services. Dashboard Designer is covered along with many of the objects and connections available within.

Lessons
- Overview of PerformancePoint Services
- Dashboard Designer
- Data Sources
- Indicators
- KPIs
- Visual Reports
- Filters
- Scorecards
- Dashboards

Lab 1: SharePoint 2010 PerformancePoint Services
- PerformancePoint Services Dashboard Designer Introduction and Data Source Configuration
- Standard or Blank KPI Demonstration
- Leaf KPI Demonstration
- Objective KPI Demonstration
- Visual Reports
- PerformancePoint Filters
- PerformancePoint Cascading Filters
Module 6: SharePoint 2010 Visio Services

Visio drawings can be very effective and in this module, we cover the shared service that allows users to share and view them. Also discussed in this module are data-connected drawings and how to configure them, along with a section on viewing drawings within a browser.

Lessons

- PerformancePoint Time Intelligence Filters
- Scorecard Settings
- Scorecard Filtered in Wizard
- PerformancePoint Dashboards

After completing this module, students will be able to:

- Explore the Dashboard Designer interface and create and configure a data source.
- Create and configure a standard KPI and a scorecard.
- Create and configure a leaf KPI and a new scorecard.
- Create two blank KPIs and then roll them into an objective KPI.
- Create and configure an analytic chart and an analytic grid, then add them to a dashboard, deploy them to SharePoint, and explore the options available.
- Create and configure a filter, and then tie the filter into both the analytic chart and analytic grid created earlier.
- Create and configure a cascading filter and then tie it into a new analytic chart and grid.
- Create a Time Intelligence data connection, a Time Intelligence filter, and create a report using both.
- Create four copies of the Objective Scorecard, configure settings in each of the four copies, and deploy them to SharePoint in a dashboard.
- Create a new leaf KPI and use that KPI in two new scorecards, one with a filter configured, and one without.
- Create a new dashboard with two pages and review editing options.

Module 7: PowerPivot

PowerPivot is not a feature of SharePoint Business Intelligence but an Excel workbook with PowerPivot can be saved to a SharePoint site and then used in a business intelligence scenario. This module is intended as an overview of the product only.

Lessons

- PowerPivot and Excel
Lab 1: PowerPivot

- Import Data from SQL
- Review and Edit the Imported Relationships
- Hide Unused Columns
- Create a PivotTable

After completing this module, students will be able to:

- Use PowerPivot within Excel to import a table from SQL Server.
- View the relationships existing within the tables they just imported from SQL Server and then import an additional table and configure a relationship between it and the existing.
- Explore how to hide columns you don't want reflected in the resulting PivotTable.
- Create a PivotTable within the existing worksheet.

Module 8: SharePoint 2010 Business Connectivity Services

In this module we will cover Business Connectivity Services, how to configure the security and explain the terminology.

Lessons

- What is Business Connectivity Services?
- BCS Terminology
- BCS Security
- Using SharePoint Designer with BCS
- Surfacing the BCS Data

Lab 1: SharePoint 2010 Business Connectivity Services

- Setting Permissions on the BDC Store
- Exploring Content Types in SharePoint
- Add a Document Library Tied to Content Types
- Creating an External Content Type
- Creating an External List
- Configuring the Business Connectivity Services for a Host URL & Setting up a Profile Page
- Add a Custom Action to a List

After completing this module, students will be able to:

- Assign administrators and permissions on the BDC Metadata Store.
- Explore the different content types available in SharePoint and learn how to locate them and their corresponding settings.
- Create a document library, configure it to accept specific content types, and then delete the document library.
- Create and configure a new external content type.
- Create an external list associated with the new external content type.
Module 9: Dashboards
Monitoring, analyzing, and managing dashboards are discussed along with details on how to use them most effectively. Our coverage of the excellent tool Microsoft Report Builder 3.0 is sparse as this course focuses on the SharePoint space.

Lessons
- Three Types of Dashboards
- Successful Dashboards
- Tables or Graphs
- Types of Graphs
- Choosing a Chart Type
- Key Performance Indicators
- Pitfalls In Dashboard Design
- Microsoft Report Builder 3.0
- Plan Your Reports
- Datasets
- SharePoint Designer
- SharePoint Web Parts

Lab 1: Dashboards
- Explore the Report Builder 3.0 Interface (Optional)
- Create an Embedded Data Source into SQL 2012 Engine (Optional)
- Create an Embedded Data Source into SQL 2012 Analysis Services (Optional)
- Create a Shared Data Source Using the Report Manager (Optional)
- Create a Shared Dataset Using the Shared Data Source (Optional)
- Three Methods for Connecting Dashboard Web Parts

After completing this module, students will be able to:
- Navigate the Report Builder 3.0 interface.
- Create an embedded data source into SQL 2012 Engine.
- Create an embedded data source into SQL 2012 Analysis Services.
- Create a shared data source using the Report Manager.
- Create a shared dataset using the shared data source.
- Create a new dashboard and explore three different ways to connect the Web Parts.
